

## MediaCoin Inc ICO Walkthrough

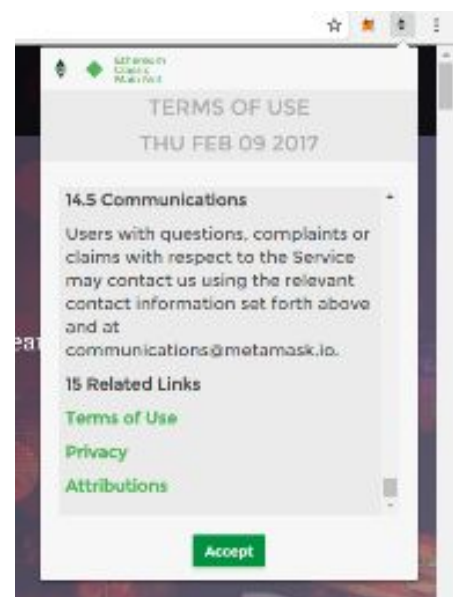

Cryptocurrency “Ethereum Classic” (ETC) is used for this transaction. ClassicMask also supports “Ethereum” (ETH) which is used with different addresses. These instructions convert cryptocurrency into tokens, participating in our Initial Coin Offering (ICO) for the Quantum MediaCoin Token (QMCT). When the ICO is over (Feb 28, 2018), these directions won't work any more and ETC/ETH will be automatically refunded.

[CLICK HERE](#) to download the ClassicMask extension from Google for Chrome.

- 1) After the extension is downloaded to your Chrome Browser, click on it's icon to get started.

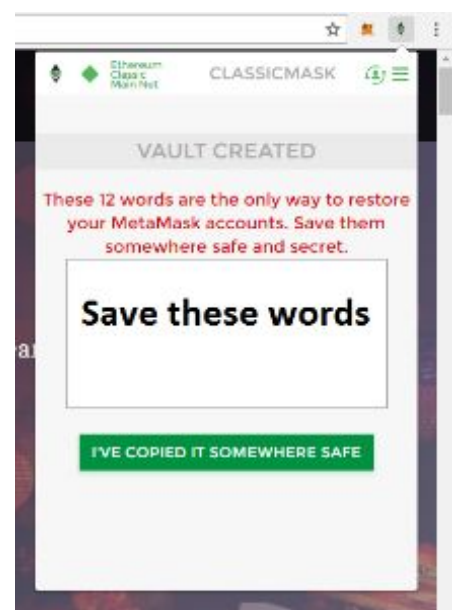

- 2) Read and accept the Privacy Notice.
- 3) Scroll all the way down and accept the Terms or Use.

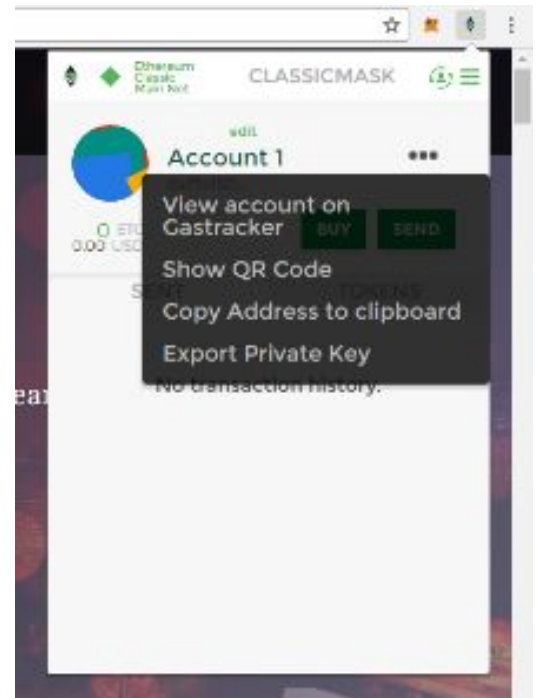

- 4) Create a password then enter it again to confirm and create your account.

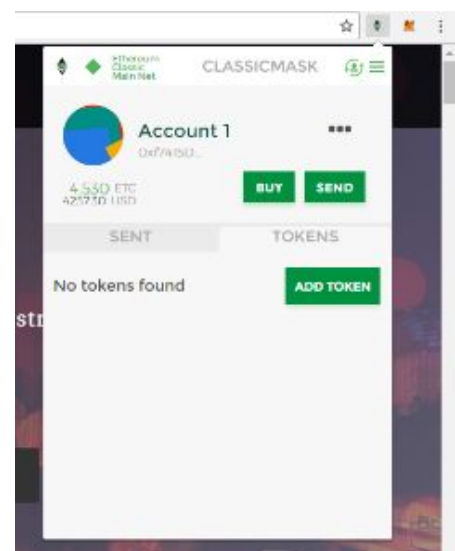

- 5) It's very important to save your 12 word phase in a safe place and in multiple places. If you lose your computer, but still have these words you'll have access to your account. Once saved, continue.

- 6) Let's load up the account with ETC. ClassicMask has a BUY button built right into extension that will take you to Changelly.com. To get your ClassicMask public address, click the three horizontal dots. There you can either copy your public address to your clipboard or use the QR Code function. With your public address you can send ETC to your ClassicMask from anywhere that you can buy ETC.

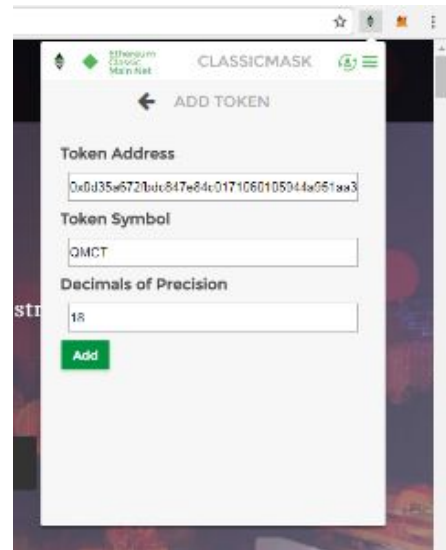

- 7) Alright! After you've loaded ETC to the account lets add the MediaCoin token so when it comes in, we'll see it immediately. Click the ADD TOKEN button.

- 8) The Token Address will be the address provided on the website:

**0x0d35a672fbdc847e84c0171060105944a951aa35**

Then click add.

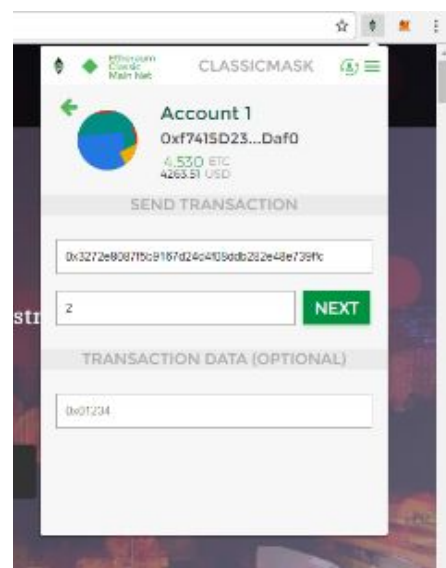

- 9) This is where the magic happens! From the home screen of ClassicMask click SEND. Enter the address provided on the website:

**0x3272e8087f5b9167d24d4f08ddb282e48e739ffc**

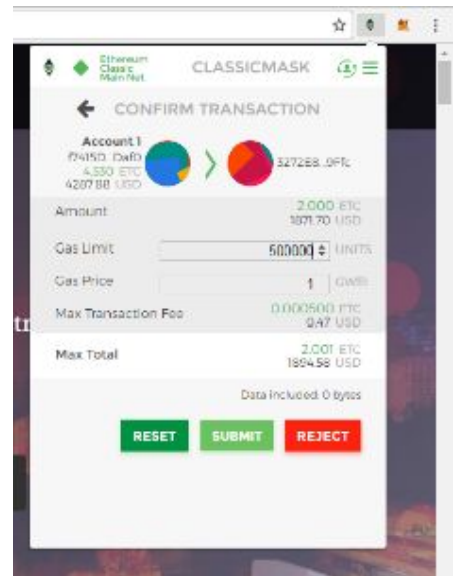

Then choose how many units of ETC you'll send off in exchange for MediaCoin (QMCT). Remember that to send your ETC you'll have to pay a gas fee, so leave a little ETC behind for gas cost.

1 ETC = 1000 QMCT

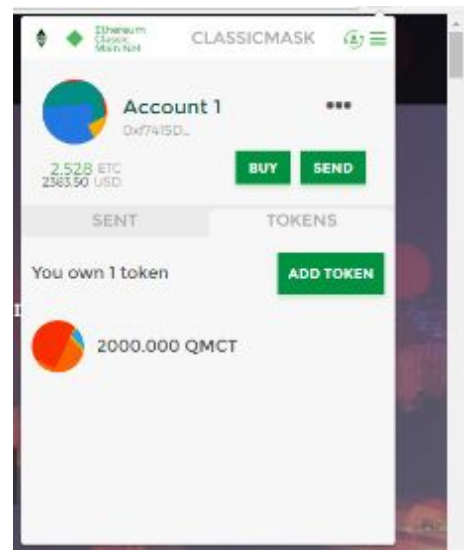

Then click NEXT.

- 10) Now, as started in the purchasing directions on MediaCoin's website, you will change your GAS LIMIT to '50,000' units and your GAS PRICE to '1' GWEI. Then click SUBMIT. (Gas Limit is the maximum payment for CPU Time, Gas Price is the cost. Unused gas is not charged, but too little gas will cost the transaction fee.)

- 11) If the proper amount of ETC was sent and your GAS parameters are set properly the transaction will proceed and very quickly (15-45 seconds) your MediaCoin will populate your token area in the home screen. For now your coins are safe in the ClassicMask extension until further notice. Thank you for investing in MediaCoin!

Thank you for participating, please ask any questions with LiveChat (bottom right side of <https://mediacoin.stream/>) or Discord <https://discord.gg/KgzPYeJ> browser chat.
